

ANNEX A

MOVEMENT STANDSTILL RULE AND EXEMPTIONS

1. THE 6 DAY STANDSTILL

Movements must not take place from any premises where one or more animals have been moved onto those premises in the 6 day period (or 20 days for any pigs on a holding onto which pigs have been moved) prior to the movement unless one of the exemptions listed below applies. Movements under any licence will trigger a 6 day standstill on the premises of destination, unless one of the exemptions listed below applies.

The movement of stock on foot via any premises not occupied by the owner or keeper of the stock being moved will trigger a 6 day standstill on those premises.

2. EXEMPTIONS

a) **Moves to markets, collecting centres, shows, breed inspections**

The movement of an animal onto premises licensed under the Animal Gatherings (England) Order 2010 for a sale, show or exhibition, for onward consignment within Great Britain for further rearing, finishing or slaughter or for an inspection to confirm specific breed characteristics will not trigger a standstill on that premises.

b) **Deer**

The movement of a deer onto premises will not trigger a standstill on any other animal on the premises. The movement onto premises of cattle, sheep, goats or pigs will not trigger a standstill on any deer in those premises.

c) **Pigs**

The movement of a pig onto premises will trigger a 20 day standstill on any pigs, and a 6 day standstill on sheep, cattle or goats on those premises. The movement of cattle, sheep or goats onto premises on which one or more pigs is kept will trigger a 6 day standstill on those pigs.

d) **Common Land**

Animals may move between common grazing and the associated in-bye land occupied by the owner or keeper without observing a standstill either on the in-bye or common grazing land. The owner or keeper must have the registered right of common on the common grazing (or equivalent in the case of the New Forest, Epping Forest or the Forest of Dean). Movements of stock from one common grazing to another do trigger the 6 day standstill. In addition, animals may return from common grazing land to in-bye land without observing a standstill on the common grazing land. However, their arrival back at the in-bye land will trigger a 6 day standstill on the in-bye land which will need to be observed if the returned stock (or any other stock on the in-bye land) are to be moved to anywhere else other than back to the common grazing. In the case of the movement of a pig to and from common grazing, any standstill period referred to above should be increased to 20 days. Sheep rounded up from common land by a commoner can be returned from that commoner's premises, to the premises of the owner of the sheep or returned to the common without triggering a 6 day standstill. Movements returning sheep to the common land may take place under General Licence.

e) **Imported animals and animals destined for export**

Imported livestock will not trigger a standstill at the first premises they are kept at (after the port or airport of entry itself, to which no standstill will apply either). Livestock for export will have to comply with EU residence time requirements, but (except for sheep and goats to be exported for breeding or fattening) need not respect a standstill on the premises of departure.

f Movements to slaughter

Animals may move off premises direct to a slaughterhouse, slaughter collecting centre, dedicated slaughter collection or dedicated slaughter market irrespective of whether livestock have moved onto those premises in the previous 6 days (or 20 days for any pig on a holding onto which other pigs have been moved). From a dedicated slaughter market or dedicated slaughter collection, no animal may return to its premises of origin or move to any premises other than a slaughterhouse.

g Sole Occupancy Authorities

Movements between premises linked by a SOA approved by the DVM will not trigger a standstill on the premises of destination and need not respect any standstill at the premises of departure. But movements onto any of the SOA premises from outside that linked group of premises will prevent movements off any of the SOA premises to premises not linked by the SOA for 6 days (or 20 days for any pigs on a holding onto which pigs are moved) unless some other exemption is applicable. Where a Sole Occupancy Licence (SOL) granted under the Foot-and-Mouth Disease Order 1983 remains in force, these exemptions will also apply but the detailed licence conditions of the existing SOL relating to movements to, from and within a SOL/SOA will continue to apply in full unless application is made for the SOL to be revoked and replaced by a SOA.

h Movements for veterinary treatment

Movements to:

All animals may move to premises for veterinary treatment and, in the case of goats for the collection of semen, irrespective of whether livestock have moved onto the premises of origin in the previous 6 days (20 days as appropriate). Once at the veterinary treatment centre all animals, except pigs, must be held in complete physical isolation from all other animals present at the premises.

Movements from:

Premises where veterinary treatment is carried out are not subject to standstill requirements and all animals (including offspring born at the veterinary premises), other than pigs, may return to the premises of origin without triggering a standstill on their return to the premises, provided that they have been isolated from other animals whilst undergoing veterinary treatment. In the case of pigs, a standstill will not be triggered on return to their premises of origin provided that they are kept in a Defra approved isolation facility for 20 days from their arrival.

i Movements to/from an Artificial Insemination Centre

Movements to:

Sheep and goats, moving to an Artificial Insemination Centre can do so irrespective of whether livestock have moved onto the premises of departure in the previous 6 days provided that they have been in a Defra approved isolation facility for 6 days prior to departure to an AI Centre.

Cattle and pigs moving to an artificial insemination centre can do so irrespective of whether livestock have moved onto the premises of departure in the previous 6 days (or 20 days as appropriate).

Movements from:

Premises where artificial insemination is carried out are not subject to standstill requirements and cattle can return to their original premises of departure without triggering a standstill on those premises.

If they have been isolated from all other animals while at the Artificial Insemination Centre, sheep and goats can return to their original premises of departure without triggering a standstill provided that they are placed in a Defra approved isolation

facility on their return, otherwise they will trigger a standstill. The recipient of the sheep or goats returning home must declare that the animals were isolated from all other animals while at the AI centre and that they have been placed in an isolation facility on return.

Pigs can also return to their original premises of departure without triggering a standstill provided that they are placed in a Defra approved isolation facility for 20 days after their return, otherwise they will trigger a standstill.

The collection of semen from goats is subject to the veterinary treatment rules - see h) above.

j Movement to a laboratory for diagnostic tests

An animal being moved to a laboratory for diagnostic tests to be carried out to ascertain whether the animal is affected by, or has been exposed to, disease need not respect any standstill on the premises of departure, and will not trigger a standstill on arrival at the laboratory. Once at the laboratory all animals, except pigs, must be held in complete physical isolation from all other animals present at the premises.

k Breeding animals

Exemptions for Breeding Pigs

No pig moving for breeding purposes") shall trigger a movement standstill on the breeding premises provided that—

- a) prior to it being moved, it either respects any movement standstill on the premises of departure, or alternatively, is isolated for 20 days prior to the movement taking place in a Defra approved isolation facility;
- b) it is placed on arrival in a Defra approved isolation facility;
- c) the recipient signs and sends to the local authority a declaration that the pig being moved is intended for breeding;
- d) it is individually identified;
- e) no other pig that has moved onto the breeding premises in the 20 day period beforehand is placed into the Defra approved isolation facility with the pig being moved;
- f) any other pigs placed into the Defra approved isolation facility with the pig being moved shall remain there until the expiry of a 20 day period following the arrival in that facility of the pig being moved;

No pig returning from breeding to its premises of departure shall trigger a 20 day standstill on return, provided either the premises of departure and the home premises are part of a "pyramid" (see i below) and the "pyramid" authorisation conditions are met or else the pig is placed in a Defra approved isolation facility for 20 days after its return.

Exemptions for Breeding Rams and Bulls

For a seasonal period (from 1 August to 30 November every year), breeding rams and bulls will:

- be allowed to leave premises that are under a 6 day standstill for a market, provided that they have been placed in a Defra approved isolation facility for six days beforehand. The sender of the animals being moved must certify (by way of a declaration on the movement licence) that the animals intended for breeding to be sold at market and have been confined in a Defra approved isolation facility for 6 days. The declaration must be sent to the Local Authority, who will note its arrival on AMLS;

- not trigger a 6 day standstill on their home premises if they are returning unsold from a market, provided that they are placed in a Defra approved isolation facility for six days. The recipient of the animals being moved must certify (by way of a declaration on the movement licence) that the animals intended for breeding purposes have been confined in a Defra approved isolation facility for 6 days;
- not trigger a 6 day standstill on the premises for breeding that they are being brought onto, provided that they are isolated for six days in a Defra approved isolation facility. In the case of breeding rams, ewes placed in isolation with those rams will themselves have to spend six days in isolation. The recipient of the animals must certify (by way of a declaration on the movement licence) that the animals have been received and been confined in a Defra approved isolation facility for 6 days.

Exemptions for Breeding Goats

Breeding goats of either gender will not trigger a 6 day standstill on premises to which they are moved for breeding provided that they are isolated for six days in a Defra approved isolation facility before they leave the premises of origin. The recipient of the animals must complete and send to the local authority a declaration that the animals have been received, are intended for breeding on those premises and that they have been confined in an isolation facility for 6 days prior to the move. Goats may return to the same breeding premises during the six day isolation period on their home premises.

The exemption for breeding goats is applied all year round and is not seasonal.

NOTE:

- a) All sheep and goats being moved for breeding purposes must be identified in accordance with the Sheep and Goats (Records Identification and Movement (England) Order 2009. The identification mark must be recorded on the movement document and in the holdings register.
- b) Breeding animals in a Defra approved isolation facility must not share the facility with other animals isolated for any other purpose.

l Exemption for pig pyramids

Movements as referred to in Article 14 of the Pigs (Records, Identification and Movement) Order 2007, i.e. "pyramid" movements where the pig is intended for breeding or growing, and is moving from a source approved by Defra to the premises of destination provided such movement has been authorised by a veterinary inspector under that article. Such animals need not respect any 20 day standstill on the premises of departure and will not trigger a standstill on their arrival and they may also return from the breeding premises without observing any standstill.

m Movements to and from shows

Pigs may move to a show without having to respect any movement standstill on the premises of departure provided they are individually identified and kept in a Defra approved isolation facility for the 20 days prior to departure for the show.

Pigs may return from a show to the premises from which they departed for the show without triggering a movement standstill on those premises provided they are kept for 20 days after their arrival in a Defra approved isolation facility. Pigs must be isolated by themselves and not share isolation facilities with other species.

Cattle, sheep and goats may attend shows without having to observe a movement standstill on the premises of departure, provided that they have been isolated from all other non-show animals on their resident holding in Defra- approved isolation facility for six days before attending the show.

On return to the premises of departure, the cattle, sheep and goats must be kept in a Defra approved isolation facility for 6 days. If they are not kept in such a facility for that period then a 6 day standstill will be imposed on that holding. Animals may return to their premises of departure between shows and move to a further show within 6 days **provided** that they are kept in a Defra approved isolation facility on those premises throughout the period they are there. Alternatively cattle, sheep and goats can move direct from one show to another without triggering a movement standstill.

ANNEX B

MULTIPLE PICK UPS/DROP OFFS

General

1. There are no restrictions on multiple pick-ups and drop-offs for loads solely consisting of deer, save that the cleansing and disinfection provisions set out in the Transport of Animals (Cleansing and Disinfection) (England) (No. 3) Order 2003 must be complied with.
2. The following multiple pick-ups and drop-offs will be permitted for all movements of cattle, sheep, goats and pigs under each licence (and of any of these species combined with deer in a single load), subject to the following conditions:
 - (a) An unlimited number of pick-ups can be made delivering to a single destination, and an unlimited number of drop-offs can be made delivering from a single starting point (which may be a market);
 - (b) there must always be a single destination for multiple pick-ups, except that in loads involving multiple pick-ups, animals may be delivered to more than one slaughterhouse (but not any other type of premises);
 - (c) other than for deliveries to slaughterhouses (see (b) above), multiple pick-ups and multiple drop-offs cannot be combined in one trip;
 - (d) one or more pick ups from a market of any description or a collecting centre are permitted only in journeys involving movements to a slaughterhouse, but only where the market(s) and/or collecting centre(s) is/are the last premises from which stock is picked up before reaching the slaughterhouse. E.g. –
 - Farm, Farm, Farm, Market, Market → Slaughterhouse, Slaughterhouse or
 - Farm, Farm, Farm, Farm, Market → Slaughterhouse or
 - Farm, Farm, Collecting Centre, Market, Collecting Centre → Slaughterhouse; Slaughterhouse
 - (e) **Where a chain of locations are visited in a multiple move resulting in the slaughter of animals, the entire move can only take place if the slaughterhouse/slaughterhouses are the final destination/destinations in the chain.**
 - (f) all multiple pick-ups and drop-offs must take place on the periphery of holdings using the approved methods described below.
 - (g) animals of more than one species may travel in a single vehicle at any one time.
 - (h) where the animals are travelling under individual licence, each batch of animals (i.e. the animals from each of the premises at which the vehicle loads) must be accompanied by a separate licence.

N.B. Stops to pick up or drop off livestock are not considered to be scheduled stops, the provisions for which are set out separately at Annex C.

MULTIPLE PICK-UPS

3. One of the following methods must be used:

(a) 'TAIL GATING'

The animals to be picked up should be loaded on to a farm trailer at the farm. The farm trailer must be thoroughly cleansed and disinfected in accordance with the Transport of Animals (Cleansing and Disinfection) (England) (No.3) Order 2003 since last being used. Transfer to the collection vehicle must take place close to the perimeter boundary entrance of the premises but not on a public road. The collection vehicle used to transport the animals will arrive at the farm, near to the farm entrance and park up on a suitable hard standing surface. The tailgate will be dropped and the farm trailer will reverse and drop its tailgate on top of the collection vehicle's tailgate. Before starting the transfer of animals, suitable hurdles/barriers/gates will be put in place to stop the animals escaping.

(b) 'USE OF PENS'

Two pens will need to be erected, and have an inter-connecting gate. Pen 1 must be big enough to hold a large animal transporter. This pen will also need to have a hard standing surface i.e. concrete, so that the area can be properly cleansed and disinfected using an approved disinfectant after each use. Pen 2 can have a soft surface i.e. grass and will be used to hold the animals prior to loading, and must have an inter-connecting gate with Pen 1. This facility must be located close to the entrance/boundary of the premises. The farmer will walk the animals, being picked up into Pen 2. The transporter will drive/ reverse into Pen 1. Once the collection vehicle is inside Pen 1, the gates must be closed, before both the tailgate and the inter-connecting gate of both pens are opened to start the loading of the animals. The hard standing surface and the pen structure themselves must be thoroughly cleansed and disinfected using an approved disinfectant after use.

N.B. The need for a Pen 1 facility to enclose the transporter does not apply where there are specialist secure loading facilities at the perimeter boundary of the farm e.g. the side-doors and ramp of the vehicle are flush with the gates of the loading area to prevent animals from escaping.

(c) 'TEMPORARY PENS'

The pen will be erected just outside the animal shed but on the periphery of the premises. The equipment/materials used to construct the pen and the surface on which it stands should first be cleansed and disinfected. The surface must be made of impermeable material such as concrete or tarmac. The transporter will reverse into the pen and the pen's gates closed to make a stockproof enclosure before the vehicle's tailgate/tailboard is lowered. The animals are moved from the shed into the pen and loaded from there into the transporter. The transporter is made secure and then leaves after cleansing and disinfection of tailgate/tailboard, wheels, wheel arches and tyres. All the equipment used to construct the pen, and the ground on which it stands, must again be cleansed and disinfected. The pen may then be dismantled.

MULTIPLE DROP-OFFS

4. One of the following methods must be used:

(a) 'TAIL GATING'

The drop off must take place at a place close to the perimeter boundary entrance of the premises but not on a public road. The transporter dropping off the animals will arrive at the farm, near to the farm entrance and park up on a suitable hard standing surface. The tailgate will be dropped and the farm trailer will reverse and drop its tailgate on top of the vehicle transporter's tailgate. Before starting to transfer the consignment of animals, suitable hurdles/barriers/gates will be put in place to stop the animals escaping.

(b) 'USE OF PENS'

Two pens will need to be erected, and have an interconnecting gate. Pen 1 must be big enough to hold a large animal transporter. This pen will also need to have a hard standing surface i.e. concrete, so that the area can be properly cleansed and disinfected using an approved disinfectant after each use. Pen 2 can have a soft surface i.e. grass and will be used as an area to hold the animals after unloading, and must have an inter-connecting gate with Pen 1. This facility must be located close to the entrance /boundary of the premises. The transporter will drive/reverse into Pen 1. Once the transporter is inside Pen 1, the gates must be closed, before both the tailgate and the inter-connecting gate of both pens is opened to start unloading the animals. Once the animals have been unloaded into Pen 2, the inter-connecting gate should be closed. The farmer will walk the animals that have been dropped off out of Pen 2 onto the farm premises. The hard standing surface and the pen structure themselves must also be thoroughly cleansed and disinfected using an approved disinfectant after use.

N.B. The need for a Pen 1 facility to enclose the transporter does not apply where there are specialist secure loading facilities at the perimeter boundary of the farm e.g. the side-doors and ramp of the vehicle are flush with the gates of the loading area to prevent animals from escaping.

(c) 'TEMPORARY PENS'

The pen will be erected just outside the animal shed but on the periphery of the premises. The equipment/materials used to construct the pen and the surface on which it stands should first be cleansed and disinfected. The surface must be made of impermeable material such as concrete or tarmac. The transporter will reverse into the pen and the pen's gates closed to make a stockproof enclosure before the vehicle's tailgate/tailboard is lowered. The animals are unloaded from the transporter into the pen and moved from there into the animal shed. The transporter is made secure and then leaves after cleansing and disinfection of tailgate/tailboard, wheels, wheel arches and tyres. All the equipment used to construct the pen, and the ground on which it stands, must again be cleansed and disinfected. The pen may then be dismantled.

MULTIPLE PICK-UPS/DROP-OFFS AT MARKETS AND COLLECTING CENTRES

5. Animals may be loaded/unloaded at any suitable point in a market or collecting centre premises approved under the relevant Animal Gatherings Order. Once all the animals have been unloaded, the vehicle being used to transport the animals must be thoroughly cleansed and disinfected using an approved disinfectant in accordance with the Transport of Animals (Cleansing and Disinfection) (England) (No. 3) Order 2003.

ANNEX C

SCHEDULED STOPS CONDITIONS

Scheduled stops will be permitted under the following conditions:

- (a) the scheduled stop must be at one of the following:-
 - i) Motorway Service Station
 - ii) Official lay-by (on a trunk/main road)
 - iii) Lorry Park or similar place;
- (b) the vehicle must be parked on a hard standing.
- (c) the vehicle must be parked at least 100 metres away from any livestock (including those on a livestock vehicle using the same facility);
- (d) the vehicle must carry a cleansing and disinfection portable kit (i.e. a bucket, water, approved disinfectant and a brush) or if none carried, the place in which the vehicle is stopped must have cleansing and disinfection facilities;
- (e) any bedding, litter, dung, urine etc leaking from the vehicle must be cleaned up and the area disinfected before the vehicle leaves; any solid waste material must be bagged and put in a separate compartment on the vehicle to which animals do not have access and taken to the point of destination for disposal;
- (f) a record of the place(s) where and time(s) when stopped must be kept by the driver and retained for 6 months;

NO transfers of livestock between vehicles (or unloading of livestock except in an emergency) are allowed at any stop, whether scheduled or not other than in the case of a multiple pick-up/multiple drop-off operation. Any multiple pick-up/ multiple drop-off operation must be in accordance with the provisions of this licence.
